Jada AI Evolution Project Charter

Jada Ai is a research and evolution laboratory founded by computer scientist Diego Torres with the mission of accelerating the arrival of safe and ethical Artificial Super Intelligence and beyond, with the vision of breaking the technology barrier plaguing Humanity.

At the present time, machine learning models are only capable of executing narrow tasks, they require constant supervision and depend on humans to be reprogrammed, this makes it very difficult and expensive for organizations to work with them.

A general-purpose autonomous AI Model (Artificial General Intelligence, also known as AGI or Strong AI) requiring minimal human intervention, possessing a bias-free degree of decision-making and a self-learning dynamic architecture enabling it to precisely execute complex operations that it is tasked with.

We believe in the following:

· PRECISION · ETHICS · INCLUSION · SAFETY · INNOVATION · GROWTH

Mission:

Our mission is to safely create the Strongest AI humanity can produce.

Vision:

A future where AI breaks the technology barrier plaguing Humanity.

Throughout our mission to achieve ASI, we would like to empower humanity towards the following:

Positive economic growth that gives humanity the time and livelihood to pursue stronger education and fruitful scientific discovery.

Scientific discovery leading to a deeper understanding of our universe so we can create and embrace future technology innovations.

Technological innovation enabling humanity to overcome its challenges and bring forth a higher standard of living.
